

THE STRUCTURE & FUNCTION OF EROTOTOXIC-PORNOGRAPHIC SEXUAL MEDIA

How *All Public Sexual Imagery*, “Mating Signals,” Hijack Cognition & Subvert Informed Consent and Choice by *The Rational Animal* (Aristotle: 350 B.C.)

4 Scientific Disciplines	Primary Variables	Variable Measure	Variable Measure	Measure of Performance
<p><u>PROXEMICS DEFINED AS:</u></p> <p>A “personal zone or "bubble"... [space, to protect oneself] from the intrusion of outsiders.” One whose private space sexuality is seen in public space is at risk of physical harm and insult. http://members.aol.com/katydidit/bodylang.htm. “The Body Language of Proxemics”</p>	<p>4 Categories of Space/Distance</p> <p>Intimates (0” to 6”), close friends (6-18”), colleagues (1.5-4 ft), social distance (4-12 ft), public distance (12 ft plus). <i>Public space</i> sexual displays always risks harm from lusting, angry, viewing publics.</p>	<p>Private Space</p> <p>Ones home w/doors, curtains, a private yard, safe space under ones control. Private space allows nudity and <i>direct</i> eye contact (eg. lovers, mother-child, doctor-patient). Nudity, sexual contact OK in safe private space.</p>	<p>Public Space</p> <p>At 4 ft plus; theatre, TV, film, circus, Internet, street, magazine, all “free” space. Predators thrive in public space. This requires clothing, eye contact avoidance, weapons. Sexual display or hint of lust provokes mirrored lust.</p>	<p>Erototoxic Media Effects</p> <p><i>Intimate private space</i> sex in risky <i>public space</i>; (stripper, nude model, prostitute, actresses acting-aping sexual lust) floods billions of viewers’ brains neurochemically w/<i>fear, shame, hate, lust</i>-mislabelled as <i>sex</i> arousal.</p>
<p><u>ETHOLOGY DEFINED AS:</u></p> <p>“The scientific study of animal behavior, especially as it occurs in a natural environment, human ethos and its formation.” http://dictionary.reference.com/browse/ethology.</p>	<p>Estrus</p> <p>[F]emale sexual excitement in “<i>mammals, excluding humans</i>, that immediately precedes ovulation” in “heat” or “rut.” http://dictionary.reference.com/browse/estrus</p>	<p>Nonhuman Female</p> <p>“Rut:” red, swollen genitalia, buttocks-up to mount, estrus odours, eye pupils dilate, frenzied lust, passionate wild coitus, commonly no “orgasm.”</p>	<p>Human Female</p> <p>Normal "love" signals: smiles, eye contact, seeking permanent mate, skin flushes, pales, breasts, genitals viewed in private space, coitus, commonly yields orgasm.</p>	<p>Erototoxic Media Effects</p> <p><i>Myth</i> of human female as an Estrus primate. Lust displays in <i>public space</i> are <i>always</i> toxic, abnormal, risky conduct for the performer and <i>the genus female</i>.</p>
<p><u>NEUROPSYCHOLOGY</u></p> <p>A study of “the nervous system, especially the brain...language, memory, and perception,” here: focused on how the two brain hemispheres process data. http://dictionary.reference.com/browse/neuropsychology</p>	<p>Two Hemispheres</p> <p>The brain obeys a "law of strength" processing novel, anxiety-provoking images over "good, true, beautiful" images or text. Pictures, especially fear/sex dominate text and imagery.</p>	<p>Right Brain</p> <p>The right half of the cerebral cortex largely elicits emotional responses to music, images, and scenes by “watching,” mirroring anger, fear, lust, shame, etc., and hijacking text, logic, cognition.</p>	<p>Left Brain</p> <p>The left half of the cerebral cortex largely elicits rational planning, cognition, abstract mature logic, text and speech, usually subverted by high left-brain arousal.</p>	<p>Erototoxic Media Effects</p> <p><i>Public</i> sex is sadosexual stimuli as the <i>inhuman Estrus myth</i> floods the right brain, hijacks left-brain cognition, text, logic and the “free” speech task of thoughtful, informed consent.</p>
<p><u>PSYCHOPHARMACOLOGY</u></p> <p>The study of “drugs that affect the mind,” here esp. excitatory & inhibitory neurotransmitters, biochemical reactions to sexual stimuli, via the brain's "100 million messages a second.” http://dictionary.reference.com/browse/PSYCHOPHARMACOLOGY</p>	<p>Mirror Neurons, The Insula</p> <p><i>Visual stimulus limbic system entry is virtually automatic, autonomic</i>. Erotic images trigger <i>mirror neurons</i>, excitatory transmitters, "flight or fight" a stress hormone insula "high" is mislabelled lust by the brain.</p>	<p>"Flight or Fight"</p> <p>Visual erotic stimuli flood the brain with dopamine (emotion, addiction) serotonin (anxiety, memory) testosterone, (lust, aggression) endorphins (morphine like endogenous opioids), glutamate (excitatory),</p>	<p>"Flight or Fight"</p> <p>....oxytocin (the love hormone), phenylethylamine, (the "love drug" allied w/amphetamines), glucose (learning and memory), norepinephrine and epinephrine (adrenalin). <i>Public Eros is a mirrored, poly-drug, insula hit</i>.</p>	<p>Visual Erototoxins Effects</p> <p><i>Erotica, Pornography, Visual Mating Calls, Pseudo Estrus</i> as an endogenous lust-shame-fear drug rush, triggering "sexual arousal,” mirroring distrust, sex callousness, harassment, assault, rape, incest of children, women.</p>
