

# The Predators

## How the Gay Agenda Aids the Sexual Abuse & Infection of Minors

**T**he data in a chart from the Centers for Disease Control (CDC)<sup>1</sup> documents that “male to male sex” (homosexuality) is deadly for youth. Nearly 93 percent of HIV infections in males aged 13–19 and 91 percent in males aged 20–24 come from “male-to-male sexual contact.” The CDC also reported in December 2012 that “new infections among the youngest MSM [males having sex with males] (aged 13–24) increased 22 percent, from 7,200 infections in 2008 to 8,800 in 2010.”<sup>2</sup>

Although over 90 percent of HIV-infected boys and men have been infected by sexual contact with men, homosexual adults still aggressively seek vulnerable youth for their “community.” Instead of demanding an end to the hyper-sexualization of youth by the media and so-called sex education, and instead of calling for the prosecution of those raping these youth, the homosexual movement demands that states refuse parental access to therapy for their children who report same-sex confusion.

### Keep Them Gay

Standing on the false “scientific” claim that children are born homosexual, New Jersey recently outlawed “sexual orientation change efforts” (SOCE) that would have allowed parents to seek therapy for their child’s sexual confusion.

Governor Chris Christie signed the bill because the American Psychological Association (APA) has allegedly proved that it is harmful to try to change a child’s sexual orientation. Christie said he believes that children must be protected from the “health risks” of such therapy, although he made no mention of the health risks associated with MSM sex. New Jersey’s largest homosexual advocacy organization, Garden State Equality, applauded the signing, asserting that nothing “needs to be fixed” for “our LGBT youth.”<sup>3</sup>

Is it a fact that young homosexual males were simply born that way, or are there other causes and factors? It’s no longer acceptable to ask that question. In a 1987 article in the *Journal of Sex Research*, Dr. John Gagnon warned his fellow “scientists” that, despite “the wish of some gay men and lesbians to locate the origins for their

desires,” they must hide the causes of homosexuality that are related to “early experience,” i.e., sexual abuse of a minor. It is especially necessary, he said, to censor “early childhood origins.” Why? Because, Gagnon asserted, “attempts to placate the oppressors will only invite further persecution. The source of freedom in everyday life for gay men and lesbians is continued vigilance and practical political action.”<sup>4</sup>

Political action such as New Jersey’s new law is supported by the APA. Following Gagnon, the authors of a 2009 APA *Resolution on Appropriate Affirmative Responses to Sexual Orientation Distress and Change Efforts* hide the abuse origins of homosexuality. Rather, they assert that “homosexuality per se is a normal and positive variation of human sexual orientation” and conclude that “there is insufficient evidence to support the use of psychological interventions to change sexual orientation.”<sup>5</sup>

## Help Them Become Gay

But even though homosexuality is “normal,” it has to be promoted. Sex researcher Gilbert Herdt explained in his 1989 book *Gay and Lesbian Youth* that he and his colleagues need to “socialize” children into homosexual activity:

We had not foreseen that . . . gay youth would also have to contend with the new horrors of AIDS . . . [and that] teenage gays and lesbians would shun older gays as role models or even as friends. . . . [To meet this challenge,] only now has gay culture begun to institutionalize socialization techniques for the transmission of its cultural knowledge to a younger generation.<sup>6</sup>

Herdt added that local gay movements should “provide their own infrastructural support for the coming out process in teens.”<sup>7</sup>

Medical anthropologist Douglas Feldman agrees, saying, “these [homosexual] kids are our future and we must invest in them.”<sup>8</sup> Although Feldman admits that “gay” boys “have about a one in four chance of developing AIDS in approximately 5 years,” he still thinks that gay elites can and should discourage HIV tests,<sup>9</sup> while encouraging gay sodomy.

In 1992 Gebe Kruks, a homosexual youth leader, warned that gay men traffic in boys:

Gay boys . . . having sex for money, shelter, love—they are at risk. . . . Gay men view these boys as recreational toys to be used. I have heard many stories of HIV-positive men having unprotected sex with boys. They don't think it matters.<sup>10</sup>

Oral and anal sodomy are now taught in sex ed programs and appear in “Young Adult” novels and books, which are often geared toward elementary school children. Alex Sanchez is an author of such Young Adult fiction. In one of his stories, two boys are chatting about sex, and one asks the other if he's ever wanted to “do it” with a girl:

“No, I guess I'm a Kinsey six.”

“A what?”

“A Kinsey six. In the fifties, Dr. Kinsey found that most people aren't exclusively gay or straight. He came up with a scale, zero to six, from totally heterosexual to completely homosexual.”<sup>11</sup>

Later, one of the teenage boys in the story has sex with a 29-year-old man.

## Sex with Minors

Since 1974, Kinseyan sex “educators” have trained millions of children to try multiple partners and homosexuality. Kinsey himself had no scruples about sexually abusing minors, and he's not alone. A “Selected References” list posted online by NAMBLA contains a wealth of citations to “research” papers discussing and advocating sex with minors. One of the listed articles, published by the late John Money in the *International Journal of Medicine and Law*, is described as “an unusually detailed investigation of two consensual long-term ‘pedophilic’ relationships. This long-term, prospective case study finds the relationships to be non-harmful and possibly beneficial for both partners.”<sup>12</sup>

A 1983 article on “Child Sexuality” by Larry L. Constantine in the *International Journal of Medicine and Law* is described in NAMBLA's list as having found that

“the most important determinant in the outcome of childhood incest or adult-child sexual encounters is the child's perception of freedom of choice in participating.” NAMBLA also offers one of the implications of this “finding”: “The research to date points to the child's subjective experience as the central concern. If it is the child's person which is to be protected from being violated against the child's will, then it is the child's will which governs the determination.”<sup>13</sup>

Did you catch that? As long as the child believes he is consenting, no harm, no foul.

That's why sexual predators want access to young males: in order to sway them to consent. Children's book authors and sex educators commonly slander protective parents as uptight, inhibited, out-of-date—and nowadays, also bigoted and hateful. They just don't understand that a really up-to-date kid needs older gay guys to guide him sexually, even if that means the child risks being infected by them with HIV. That's what predators do. ☹
